

PRELOADED APPLICATORS

The hidden nightmare of blocked drainage pipes is now a thing of the past thanks to FilterSleeve®. Tested and proven, this cost-effective drain filter greatly increases the service life of pipelines. Preventing fine silt and sand entering (with an almost 100% reduction of sediment settling), FilterSleeve® ensures greater flow of water through the system and ongoing peace of mind.

65mm, 110mm,
160mm and 200mm
drainage pipe.

INSTALLATION

STEP 1.

Uncoil the drainage pipe as much as possible, preferably alongside a pre-dug trench. Thread the pipe through the applicator tube and tie a temporary knot in FilterSleeve® to stop it sliding back over the pipe end.

STEP 2.

Secure the end of the pipe to a fixed spot. This could be a post, tree, vehicle or anything else that will provide a strong anchor point.

STEP 3.

Holding the drainage pipe and applicator as level as possible, slide applicator along length of the pipe. To ensure maximum effectiveness maintain even tension on the FilterSleeve® as it is applied.
